Category of change: Change of packaging

Current State: Vials of above mentioned MACS GMP Peptivators are capped with a blue cap.

Planned change: In future, vials of above mentioned MACS GMP Peptivators will be capped with a light blue cap. Both caps are supplied by the same manufacturer.

Justification/Evaluation: To ensure continuous production, the cap has to be changed to another product. There is no change of the product itself or primary packaging. Therefore no impact on the performance, quality and safety of the affected products could be identified.

Estimated Implementation: Q1/2022
Color change of vial caps of MACS® GMP PepTivators
